

"this"

Explained to 5 year old

Chetan Mahajan
@_chetanmahajan

Bad Time

Object 1

this.howAreYou => Bad Time

Great Time

Object 2

this.howAreYou => Good Time

Chetan Mahajan
@_chetanmahajan

Imagine you're at a party. When you say "I'm having a great time," the **"I" in your sentence refers to you.**

Now, if someone else says **"I,"** it refers to **them.**

In JavaScript, **"this"** works similarly. It refers to the **object it belongs to**, and its value changes depending on how and where it's used.

@_chetanmahajan

In JavaScript, "this" is a keyword that refers to the **object it belongs to**.

Its value depends on the context in which it's used.

Different Scenarios for "this":

- **In a Method:** In an object's method, "this" refers to the object. Like at the party, when someone says "I," they're talking about themselves.
- **Alone:** When used alone, "this" refers to the global object. In a browser, that's usually the window object.
- **In a Regular Function:** "this" in a regular function refers to the global object (in non-strict mode) or is undefined (in strict mode).
- **In an Event Handler:** Inside an event handler, "this" refers to the element that received the event.

Example:

```
function PartyGuest(name) {  
  this.name = name;  
  this.speak = function() {  
    console.log(`I'm ${this.name} and I'm having a great time!`);  
  };  
}  
  
let guest1 = new PartyGuest("Alex");  
let guest2 = new PartyGuest("Chetan");  
  
guest1.speak();  
// Outputs: "I'm Alex and I'm having a great time!"  
  
guest2.speak();  
// Outputs: "I'm Chetan and I'm having a great time!"
```
